M7
method (grey numbers: O1 slices without a crossing)
d
Pe ≈ 470
Pe ≈ 94
Pe ≈ 19
median over slices
18 slice(s) without a shift
EIV shift, Δlog10 Da*disc
(M5 minus best non-EIV, decade)
H2c: no verdict
none of the 18 slices has a discovery
boundary for both M5 and its comparator
factor 2
MDE 0.25
0.5 %
2 %
5 %
isotherm error ε (% of q*), σ = 2 %
